

### SUPERLIFT 4" LIFT SYSTEM 2007-2016 JEEP WRANGLER (JK) 2WD and 4WD INSTALLATION INSTRUCTIONS

### THANK YOU FOR CHOOSING SUPERLIFT FOR ALL YOUR SUSPENSION NEEDS!!

### INTRODUCTION

Installation requires a professional mechanic.

Prior to beginning, inspect the vehicles steering, driveline, and brake systems, paying close attention to the suspension link arms and bushings, sway bars and bushings, tie rod ends, pitman arm, ball joints and wheel bearings. Also check the steering sector-to-frame and all suspension-to-frame attaching points for stress cracks. The overall vehicle must be in excellent working condition; repair or replace all worn parts.

Read instructions several times before starting. Be sure you have all needed parts and know where they install. Read each step completely as you go.

### NOTES:

Prior to beginning the installation, check all parts and hardware in the box with the parts list below. If you find a packaging error, contact Superlift® directly. Do not contact the dealer where the system was originally purchased. You will need the control number from each box when calling; this number is located at the bottom of the part number label and to the right of the bar code.

A precision steering alignment, including the centering of the steering wheel, is required in order for the vehicle's Electronic Stability Program to function properly. Using "all laser" alignment equipment is recommended.

33" – 35" tires can be used without fender trimming.

Maximum tire width = 12.5"; Minimum tire diameter = 17"; Wheel width 8-9"; Minimum backspacing = 4.5"; Maximum backspacing = 4.75"

Stock wheels can be used with 33" tires. If 35" tires are used with stock wheels, 1.5" wheel spacers are required for tires to clear frame rails and allow full turning radius.

2 Door Wranglers - Due to increased driveshaft operating angles and short shaft length, factory rear driveshaft life will be reduced. When replaced, Superlift suggests converting to a dual cardan style shaft. These shafts can be purchased at many driveshaft shops.

An arrow on diagrams indicates which direction is toward the front of the vehicle.

A foot-pound torque reading is given in parenthesis ( ) after each appropriate fastener.

Do not fabricate any components to gain additional suspension height.

Prior to drilling or cutting, check behind the surface being worked on for any wires, lines, or hoses that could be damaged. After drilling, file smooth any burrs and sharp edges.

Paint or undercoat all exposed metal surfaces.

Prior to attaching components, be sure all mating surfaces are free of grit, grease, excessive undercoating, etc.

A factory service manual should be on hand for reference.

Use the check-off box " $\square$ " found at each step to help you keep your place. Two " $\square$ " denotes that one check-off box is for the driver side and one is for the passenger side. Unless otherwise noted, always start with the driver side.

**PARTS LIST** ... The part number is stamped into each part or printed on an adhesive label. Identify each part and place the appropriate mounting hardware with it.

### FRONT DISASSEMBLY

**NOTE:** Save all factory components and hardware for reuse, unless noted.

### 1) PREPARE VEHICLE...

□ Place vehicle in neutral. Raise front of vehicle with a jack and secure a jack stand beneath each frame rail, behind the front / lower link arms. Ease the frame down onto the stands, place transmission in low gear or "park", and chock rear tires. Remove front tires.

□ Position a jack so that it supports, but does not raise, the front axle.

### 2) TRACK BAR...

☐ Remove the bolts securing the front track bar-to-axle and frame Save hardware for re-use.

### 3) SWAY BAR LINKS AND SHOCK ABSORBERS...

□□ Remove and discard the front sway bar links.

# □□ Be sure the factory rubber isolators are still in place inside the coil spring tower.

□□ Insert the upper end of the coil spring into the tower first, followed by the lower seat. Be sure

**ILLUSTRATION 1** 

that the coils are indexed so they seat properly then raise the axle enough to hold the coil springs in place.

□□ Install shock absorber. Tighten the upper hardware until bushings swell slightly. Install the lower shock bolts, and factory nut. Do not tighten at this time. Apply shock decals. After the shock absorber installation is complete, the jack can be lowered and relocated to allow installation on the opposite side.

### 9) TRACK BAR...

- ☐ Set the overall length of the bar to 33-1/8" measured between eye centers. This will serve as a baseline prior to final adjustment. Do not tighten the jam nut at this time.
- □ Position the adjustable end of the track bar in the mount on the axle. Insert the stock bolt to temporarily hold the track bar in place. This end of the track bar must be detached from the axle again in a later step so do not install its nut at this time.
- ☐ Connect upper end of bar-to-frame using the stock bolt and nut. Do not tighten at this time.

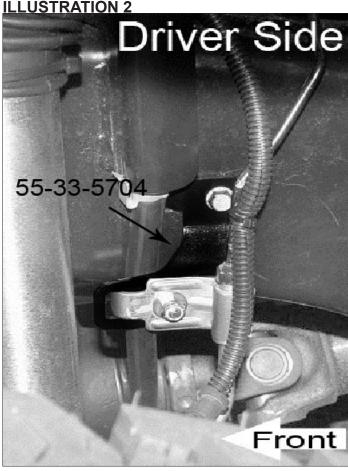

**NOTE:** Final track bar adjustment and tightening are performed in later steps.

**10) BRAKE HOSES...[ILLUSTRATION 2] NOTE:** If optional Bulletproof brake hoses are being used, these relocation brackets are not required.

□□ Attach the appropriate brake hose upper bracket (#55-33-5704 driver side; #55-34-5704 passenger side) to the factory brake hose. Use the supplied 1/4" x 3/4" bolt, facing outward. The washer is used on the bolt head side. Install the supplied Nyloc nut and tighten (76 in-lb).

□□ Carefully re-form the metal brake line (do not kink the line) then attach the Superlift bracket to the factory location. (76 in-lb).

# as viewed from driver side eccentric cam bolt in "positive" setting

### 11) SWAY BAR LINKS...

□□ Remove the factory rear sway bar-to-axle links, and install them on the front of the vehicle. (**NOTE:** Rubicon models must install Kit Box # 5712 per separate instructions.) Attach the swivel (upper) end of the sway bar link-to-bar body (the stud faces inboard) then secure using factory hardware

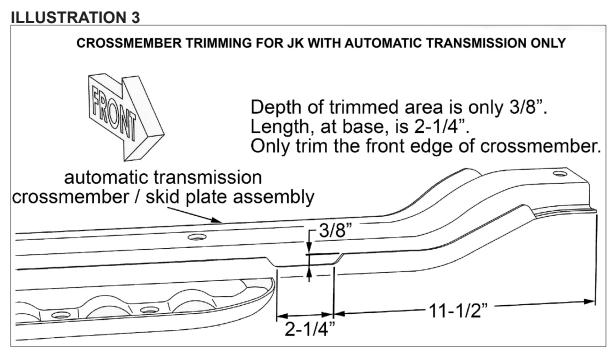

(66).

□□ Attach the lower (eye ring) end of sway bar link-to-axle. The eye ring seats against the inboard side of the mounting tab. The factory mounting bolt installs from the outboard side through the mounting tab then through the eye ring. Position one supplied .5" ID x 1.6" OD x .1875" thick washer onto the factory mounting bolt, install factory nut then tighten (75).

# MODELS WITH A CROSSMEMBER DIFFERENT THAN THE ONE PICTURED IN ILLUSTRATION 3 MOVE TO STEP 13.

### 12) FRONT CROSSMEMBER, AUTOMATIC TRANSMISSION MODEL ONLY...[ILLUSTRATION 3]

☐ Most models with automatic transmissions are equipped with a transmission pan skid plate / crossmember assembly. The forward lip of the crossmember must be trimmed to create adequate clearance between it and the driveshaft during full extension travel. The trimming process can be accomplished without removing the crossmember. Check for adequate clearance with suspension a full extension (with the front axle "hanging"). Excessive trimming weakens the crossmember.

### 13) FRONT DRIVESHAFT...

□ Connect the front driveshaft-to-axle using the factory hardware (81).

### 14) TIRES / WHEELS...[ILLUSTRATION 4]

□□ Tighten the lug nuts (115) in the sequence shown.

**WARNING:** When the tires / wheels are installed, always check for and remove any corrosion, dirt, or foreign material on the wheel mounting surface, or anything that contacts the wheel mounting surface (hub, rotor, etc.). Installing wheels without the proper metal-to-metal contact at the wheel mounting surfaces can cause the lug nuts to loosen and the wheel to come off while the vehicle is in motion.

**WARNING:** Retighten lug nuts at 500 miles after any wheel change, or anytime the lug nuts are loosened. Failure to do so could cause wheels to come off while vehicle is in motion.

**ILLUSTRATION 4** 

LUG NUT TORQUE SEQUENCE

**FOLLOW THE PATTERN SHOWN TO** 

TORQUE THE LUG NUTS.

### 15) INITIAL CLEARANCE CHECK, FRONT...

☐ With the vehicle still on jack stands, and the suspension "hanging" at full extension travel, cycle steering lock-to-lock and check all components for proper operation and clearances. Pay special attention to the clearance between the tires / wheels and brake hoses, wiring, driveshaft-to-crossmember, etc.

to the front suspension will take place once rear lift is completed.

### REAR DISASSEMBLY

and secure a jack stand beneath each frame rail, just ahead of the rear / lower link arms. Ease the frame down onto the

# 1 □ Lower vehicle to the floor. Final tightening and adjustments 3 2 16) PREPARE VEHICLE... □ Place vehicle in neutral. Raise rear of vehicle with a jack stands, place transmission in low gear or "park", and chock front tires. Remove rear tires. □ Position a jack so that it supports, but does not raise, the rear axle. 17) TRACK BAR AND LINK ARMS... □ Disconnect the factory track bar from the frame and loosen the axle attachment point. □□ Loosen, do not remove, the bolts securing both lower link arms to the axle and frame.

# 18) BRAKE HOSES...

□□ If optional extended length Bulletproof brake hoses are being used, The supplied relocation brackets are not required. Install Bulletproof hoses now per separate instructions.

□□ Loosen, do not remove, the bolts securing both upper link arms to the axle and frame.

If Bulletproof hoses are **not** used, detach the factory brake hose bracket at the frame. This bracket holds the connection between the rubber brake hose and the metal brake line.

### 19) WHEEL SPEED SENSOR WIRES...

□□ On each side, at the driver side upper link arm frame mount, two clips retain the wheel speed sensor wires. Disconnect the forward-most clip from the frame mount.

### 20) SHOCK ABSORBERS...

□□ Remove and discard the factory rear shock absorbers.

### 21) EMERGENCY BRAKE CABLE BRACKETS, DIFFERENTIAL WIRING...

□ Locate the wire bracket securing the emergency brake cables to the bottom of the rear floorboard, above and slightly in front of the rear axle. Unbolt the wire bracket.

□ On Rubicon models, a wiring loom for the locking differential clips to a bracket bolted to the top of the differential cover. Un-clip the wiring loom then either remove the bracket, or use a mallet to flatten-out the clip side of the bracket. Failure to do so will cause the wiring loom to snag on the bracket during suspension articulation.

### 22) COIL SPRINGS...

Lower the axle just enough to facilitate removing the coil springs. **CAUTION:** The driveshaft has a rubber boot on the transfer case end. If the axle is lowered too much, boot bind / damage may occur.

### REAR ASSEMBLY

### 23) COIL SPRINGS...

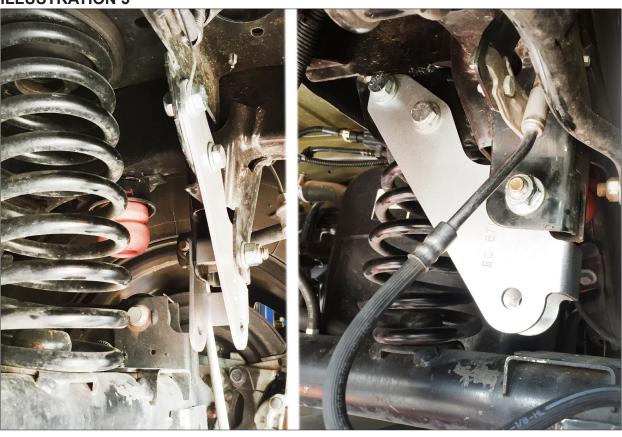

□□ Install the new coil springs. Rotate the coils so that they seat properly in the coil buckets then raise the axle enough to seat the springs.

# 24) TRACK BAR BRACKET... [ILLUSTRATION 5]

□ Position the Superlift track bar bracket (#55-50-5704) on the factory rear track bar mount and insert the supplied 9/16" x 3-1/4" bolt, from the front, through the Superlift bracket and factory mount. Install the washer and nyloc nut but do not tighten.

 $\Box$  Install the two supplied 1/2" x 1" bolts, flat washers, and Stover nuts, in the top two holes. These can be installed from the rear. Tighten (57).

### **ILLUSTRATION 5**

- ☐ Tighten the 9/16" bolt. (82)
- ☐ Reconnect track bar using factory hardware. The bar will be tightened in a later step.

# 25) BRAKE HOSE BRACKETS... [ILLUSTRATION 6 & 7]

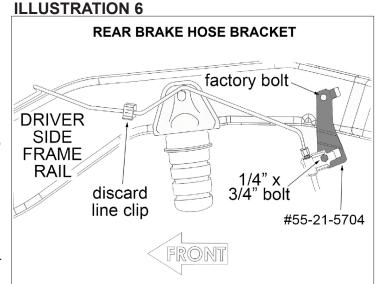

**NOTE:** If optional Bulletproof brake hoses are being used, these brake hose brackets are not required.

Perform this step one side at a time.

- $\Box\Box$  A plastic clip attaches the metal brake line to the frame; remove and discard this clip.
- □□ Attach the rear brake hose bracket (#55-21-5704 driver side and #55-22-5704 passenger side) to the factory frame location using the factory hardware. Be sure the alignment tab engages with the hole in the frame. Tighten (95 in-lb).
- □□ Attach the brake hose-to-bracket using the supplied 1/4" x 3/4" bolt, washer, and Nyloc nut. Install bolt from the outside, place the washer on the nut side then tighten (95 inlb).
- □□ Carefully re-form the metal line so that it runs along the upper edge of the frame, as shown. The supplied Adel clamps (one per side) hold the re-formed metal brake lines snuggly against the frame to prevent them from potentially making contact with the sway bar links.

### 26) EMERGENCY BRAKE CA-BLES, 2-DOOR MODEL ONLY...

□□ The emergency brake cables

REAR BRAKE HOSE BRACKET

1/4" x 1/2"
self-tapping bolt
clamp

are routed beneath the vehicle body (along the transmission tunnel), above a frame crossmember then down to each wheel. On each side, disconnect the cables at the axle and re-route them to below the frame crossmember. Reattach cables-to-axle.

# 27) EMERGENCY BRAKE CABLES, 4-DOOR MODEL ONLY... [ILLUSTRATION 8]

☐ The emergency brake cables are routed beneath the vehicle body (along the transmission tunnel), above a frame crossmember, then through a wire hanger bracket that is attached to the floorboard. Detach the two emergency brake cables from the wire hanger bracket then detach the wire hanger

**ILLUSTRATION 8** 

bracket from the floorboard.

□ Position the wire hanger bracket at the center of the frame crossmember, as shown. Using the wire hanger bracket as a template, mark the location for the two mounting holes to be drilled. Drill the mounting holes using a 13/64" bit. Attach the wire hanger bracket-to-frame crossmember using the supplied 1/4" x 1/2" self-tapping bolts and tighten (75 in-lb).

□□ On each side, disconnect the emergency brake cable at the axle and re-route them to below the frame crossmember. Insert each emergency brake cable into the relocated wire hanger bracket then reconnect emergency brake cablesto-axle.

(#716244).

### 28) SWAY BAR LINKS ...

□□ Drill out the holes in the ends of the stabilizer bar to 1/2".

□□ Lubricate the supplied bushings and sleeves with a light. Silicone

or Lithium based grease; then in-

EMERGENCY BRAKE RELOCATOIN 1/4" x 1/2" MINITED TO THE TOTAL TOT self-tapping bolts FRONT hanger's new location frame crossmember factory hanger location at floorboard rear axle brake cables AS VIEWED FROM BENEATH VEHICLE, LOOKING UP. stall 3/4" ID bushings and 1/2" ID sleeves into the bottom (eyeing) end of the Superlift sway bar links

□□ Apply anti-seize to the top (stud) end of the Superlift sway bar links. Install the 1/2" jam nut onto the link then the 90° swivel end. Adjust the swivel end to reach a center of swivel-to-center of eye length of 11-1/4" then tighten the jam nut.

□□ From the factory, the sway bar links mount outboard of the anti-sway bar body with their upper studs facing inboard. The Superlift links install facing the same direction as factory.

□□ First position one 1/2" SAE washer onto the link stud, then insert stud through the sway bar body attachment hole. Position remaining 1/2" SAE washer, Nyloc nut and tighten (80).

□□ Attach the Superlift links' lower ends using the factory hardware. Tighten (75).

### 29) SHOCK ABSORBERS...

□□ Install shock hardware / boots. Install shocks using the factory bolts. At this time, tighten only the upper shock mount bolts (37). Apply shock decals.

# IF VEHICLE IS 2 DOOR OR NOT EQUIPPED WITH EVAPORATIVE CANISTER, MOVE TO STEP 32.

### 30) EVAPORATIVE CANISTER...[ILLUSTRATION 9]

☐ The evaporative canister is located on the driver side between the transfer case and rear axle. Loosen the rear single bolt of the evaporative canister but do not remove.

□ Remove the front two bolts. Measure from the center of the inside hole "A" towards the center of the vehicle 2", then to the rear of the vehicle 9/16", mark and drill a 5/8" hole.

□ Pivot the evaporative canister to the driver side of the vehicle so the hole "A" is now over the "B" position and reinsert the factory bolt. (75)

□ Insert the remaining factory bolt trough the newly drilled hole. (75) Tighten the rear bolt. (75).

### **ILLUSTRATION 9**

### FINAL PROCEDURES

### 31) TIRES / WHEELS...

□□ Install the tires and wheels as per step 15.

### 32) INITIAL CLEARANCE CHECK, REAR...

□ With the vehicle still on jack stands, and the suspension "hanging" at full extension travel, check all components for proper operation and clearances. Pay special attention to clearance between the tires / wheels and brake hoses, driveshaft, etc.

### 33) HARDWARE TIGHTENING SEQUENCE...

□ Remove jack stands and lower vehicle to the floor. The suspension is now supporting vehicle weight.

□□ Rear track bar, both ends (125).

ing wheel, is required in order for the vehicle's Electronic Stability Program to function properly. A

laser alignment is recommended.

### **Important Maintenance Information**

It is the ultimate buyer's responsibility to have all bolts / nuts checked for tightness after the first 100 miles and then every 1000 miles. The steering, suspension and driveline systems, plus wheel alignment should be inspected by a qualified professional mechanic at least every 3000 miles.

### **Limited Lifetime Warranty / Warnings**

Your Superlift® product is covered by the Limited Warranty explained below that gives you specific legal rights. This limited warranty is the only warranty Superlift® makes in connection with your product purchase. Superlift® neither assumes nor authorizes any retailer or other person or entity to assume for it any other obligation or liability in connection with this product or limited warranty.

### Superlift, LLC, Limited Lifetime Warranty

What is covered? Subject to the terms below, Superlift® will repair or replace its products found defective in materials or workmanship for so long as the original purchaser owns the vehicle on which the product was originally installed. Your warrantor is Superlift, LLC, doing business as Superlift® Suspension Systems ("Superlift®").

What is not covered? Your Superlift® Limited Warranty does not cover products Superlift® determines to have been damaged by or subjected to:

- Alteration, modification or failure to maintain.
- Normal wear and tear (bushings, rod ends, etc.). Scratches or defects in product finishes (powder coating, plating, etc.).
- Damage to, or resulting from, the vehicle's electronic stability system, related components or other vehicle systems.
- Racing or other vehicle competitions or contests. Accidents, impact by rocks, trees, obstacles or other aspects of the environment.
- Theft, vandalism or other intentional damage.

Remedy Limited to Repair or Replacement. The exclusive remedy provided hereunder shall, upon Superlift's inspection and at Superlift's option, be either repair or replacement of the product covered under this Limited Warranty. Customers requesting warranty consideration should contact Superlift® by phone (1-800-551-4955) to obtain a Returned Goods Authorization number. All removal, shipping and installation costs are customer's responsibility.

If a replacement part is needed before the Superlift® part in question can be returned, you must first purchase the replacement part. Then, if the part in question is deemed warrantable, you will be credited / refunded.

### Other Limitations - Exclusion of Damages - Your Rights Under State Law

- Neither Superlift® nor your independent Superlift® dealer are responsible for any time loss, rental costs, or for any incidental, consequential or other damages you may have.
- This Limited Warranty gives you specific rights, and this is the only warranty Superlift® makes in connection with your product purchase. You may also have other rights that vary from state to state. For example, while all implied warranties are disclaimed herein, any implied warranty required by law is limited to the terms of our Limited Lifetime Warranty as described above. Some states do not allow limitations of how long an implied warranty lasts and / or do not allow the exclusion or limitation of incidental or consequential damages, so the limitations and exclusions herein may not apply to you. Superlift® neither assumes nor authorizes any retailer or other person or entity to assume for it any other obligation or liability in connection with this product or Limited Warranty.

### Superlift, LLC, Satisfaction Guarantee

We want you to purchase our product with confidence and be 100% satisfied with the end result. If you have any legitimate issue, and Superlift® cannot rectify it to your satisfaction, Superlift® will take back the Superlift® brand product and refund the customer 100% of the product purchase price. The details:

- Offer valid to the original retail consumer for six months after product purchase.
- May require a Superlift® dealer's participation in order to assist in "troubleshooting" the issue.
- Any costs related to labor, freight, incidental or consequential are not refunded.
- Refund will not exceed Superlift's® published retail price.

### Important Product Use and Safety Information / Warnings

As a general rule, the taller a vehicle is, the easier it will roll over. Offset, as much as possible, what is lost in rollover resistance by increasing tire track width. In other words, go "wide" as you go "tall"; always use as wide a tire and wheel combination as feasible to enhance vehicle stability. We strongly recommend, because of rollover possibility, that the vehicle be equipped with a functional roll bar and cage system. Seat belts and shoulder harnesses should be worn at all times. Avoid situations where a side rollover may occur.

Generally, braking performance and capabilities are decreased when significantly larger / heavier tires and wheels are used. Take this into consideration while driving. Also, changing axle gear ratios or using tires that are taller or shorter than factory height will cause an erroneous speedometer reading. On vehicles equipped with an electronic speedometer, the speed signal impacts other important functions as well. Speedometer recalibration for both mechanical and electronic types is highly recommended.

Do not add, alter, or fabricate any factory or aftermarket parts to increase vehicle height over the intended height of the Superlift® product purchased. Mixing component brands is not recommended.
